

School Garden Project

This year, Room 8 decided to take on the task of doing up a part of the school garden. We learned all about plants and flowers, from what they need to grow to how they help important insects.

Fintan weeded out the beds for us and we mixed in fresh compost to make the soil nice and prepared for the plants. It was messy work!

We planned the beds by placing our plants where we wanted them to end up.

We then planted our plants using shovels and our hands, making sure to break up the roots to let them grow outwards. We also made sure to water them in really well.

We made sure to keep the plants nice and moist and free from weeds. This gives them the best chance possible to grow. We used lots of different varieties such as lupins, dianthus, osteospermum and more!

Thanks to all their hard work the plants have grown in really well. We also painted a beautiful pot for some lilies. If only they'd bloom!
